

ROBERTET HEMP EXTRACTS CHARTER

PARTNERSHIP

Robertet and Klersun have a joint venture to develop consumer products with hemp extracts. Together the companies are working to develop and supply products for companies looking to add hemp derived cannabinoids to their products. Our partnership is based on a common set of values and expertise to create the most comprehensive partnership from the seed to hemp extract solutions.

INDUSTRY STEWARDSHIP

Robertet was the first flavor & fragrance company to venture into the CBD space. We have over 2 years of expertise working with this unique ingredient.

SUSTAINABILITY

Hemp is sustainable by nature: It does not require any fertilizers or pesticides for cultivation. We offer conventional and certified organic extracts. Today, the supply chain is vertically integrated in the US, Switzerland and will expand in other EU locations. The whole plant can be used for a variety of applications (e.g. seeds make fuel, fibers make clothing, flower and leaves makes medicine for personal care and supplements, and the roots cure the soil).

AGRICULTURAL EXPERTISE

Robertet and Klersun will invest in new cultivars and technology to prepare for tomorrow's market.

Our teams will ensure our hemp is grown in the most appropriate geographical locations in close proximity to our extraction plants, where we apply all of our knowledge in botanicals to select and optimally prepare the biomass.

NATURALNESS & TRANSPARENCY

Natural expertise does not happen overnight. Robertet is successfully applying over 170 years of natural knowledge to develop a safe and technically driven CBD solution.

Our supply chain is totally transparent and an understanding of the storytelling is possible all the way from the field to the extract.

SCIENCE & ACADEMIC RESEARCH PROGRAM

To provide breakthrough innovation in consumer products with hemp derived cannabinoids, Klersun and Robertet collaborate with two major academic partners, Oregon State University (OSU) in the US, and PharmaGnose in Greece. To support the full efficacy of our hemp ingredients, we continue to conduct several scientific and clinical studies through this comprehensive research program.

TECHNOLOGY

We are constantly innovating our extraction methods to be able to offer new extracts using the cleanest and greenest processes while lowering the level of total THC below the level of detection.

We have developed unique delivery systems for CBD in various applications: oil soluble, water soluble, and powder formulas.

We have also developed fragrances and flavors that complement our hemp's natural organoleptic profile to perfection.

ROBERTET
GROUPE

QUALITY & SAFETY

Robertet Quality Assurance program covers all safety standards for food with FSSC 22000, and for cosmetics with ISO 22716, as well as for pharma thanks to pharmaceutical GMP in our Grasse, France location. All of our active hemp ingredients are undergoing toxicological tests to guarantee their safety.

ANALYTICAL SKILLS

Robertet's unique, natural analytical methodologies are used to accurately identify all cannabinoids with very low limits of detection and to guarantee they meet our stringent specifications. All of our hemp derived cannabinoids are supported by full stability data.

LEGITIMACY

Adding value to your brands rather than just cost –safeguarding your brand's equity and building your consumer base sustainably.

Robertet tests every batches for purity, consistency, contaminants and provides complete sets of documentation.

GUIDANCE

Robertet combines the knowledge we have acquired via product development, regulatory, and consumer insights to navigate an ever-dynamic marketplace for sustainable revenue growth. We are part of hemp trade associations as well as several working groups to precisely understand the evolution of the regulations, markets and the opportunities offered.

TRUST

Trust in centuries of heritage in natural ingredients, the safety and quality come from the best sources of industrial hemp with a Self-GRAS status, organic certification, NDIN (New Dietary Ingredient Notification - in process for the USA) and Novel Food Dossiers (in process for EU & UK).

FUTURE

We have engaged in a process to constantly improve every steps of the CBD extraction journey.

We are also working to better understanding the mechanisms of action of hemp derived cannabinoids to design the most appropriate and efficacious delivery system for a given application.

We believe in the future of hemp derived cannabinoids for the health and wellness market. We also understand our role to demonstrate the safety and the efficacy of CBD and potentially other hemp derived cannabinoids. We also trust that the Robertet –Klersun partnership combines all of the necessary expertise to offer the best solutions to our customers and beyond.
